Other standard RAL colors are available for a small additional fee.

### Unlimited Possibilities

- Local and national campaigns
- Greetings and local events
- News
- Parking information
- Corporate identity
- Opening hours

# Outdoor SMD PYLON

The PYLON is very suitable for communicating messages containing a combination of text and pictures. PYLON can both be used in environments where the viewer is up to close to the sign and to communicate messages, which the viewers must be able to see from a distance e.g. parking information and campaigns.

Bright in every way

## One Sign – Countless Possibilities

A digital sign is a natural eye catcher, which is ideal for both just-in-time communication as well as planned communication such as campaigns and corporate identity. Digital signage offers flexible and effective exposure of messages and it is not limited to just one message or one communicative purpose.

One sign can for instance be used for advertising corporate identity, welcoming guests, opening hours, campaigns, parking info, news, traffic information, local events and much more. The countless possibilities make it possible to compile content for the digital signs, which perfectly matches your communicative needs.

## Online and User-friendly Management

A digital sign is online and the content is managed centrally by you. You can fast and easy change and update the content on either one sign, selected signs or all of your signs. If you wish, you can create decentralised users with different rights, who via a template can upload content for either one or more signs.

A decentralised user could be the local police, who can upload traffic information to signs by main roads; the citizen service centre, who can upload campaigns to signs in the city area or a company's different departments, who can upload content to the company's digital sign.
